CP La Tercia United GR

Treatment Schedule for Adult Mosquito Control_2022.

Below is a list of the dates on which treatments will take place to control adult mosquitoes on your premises. We also attach a notice sheet for biocide treatments for neighbors and residents, this document contains a series of recommendations to be taken into account on the dates of these applications.

Important:

In order for applications to be as effective as possible, irrigation must be suspended on treatment nights in green areas subject to monitoring, otherwise the company cannot guarantee full effectiveness, nor access to all areas scheduled to be treated, as the soil must be dry to be walked on, and the product must remain on the vegetation throughout the night.

Javier Escobar García.

Technical Manager.

In San Javier on 20 April 2022.

RECOMENDACIONES EN ZONAS A TRATAR

Antes del Tratamiento	Durante el tratamiento	Después del tratamiento
<p>Previo al tratamiento les serán comunicadas las áreas afectadas por el mismo.</p> <p>Si el tratamiento se va a realizar en zonas interiores, se deberá cortar el sistema de ventilación forzada en las zonas donde se vaya a realizar el tratamiento.</p> <p>Si el tratamiento se va a realizar en zonas exteriores, se deberán cerrar puertas y ventanas de edificios anexos o cercanos al área de tratamiento.</p>	<p>No estará permitida la presencia de personas ajenas al personal Técnico de la empresa en las zonas a tratar durante la realización del tratamiento.</p> <p>Tampoco está permitida la presencia de animales durante la aplicación de los biocidas.</p> <p>No estará permitido el tránsito de personas, animales o vehículos durante la realización de tratamiento.</p>	<p>No se utilizarán las zonas tratadas, así como las que hayan podido ser afectadas, hasta pasadas, como mínimo 12 Horas después de haber realizado el tratamiento. Estas áreas habrán sido comunicadas de forma previa.</p> <p>Si el tratamiento se ha realizado en zonas interiores, antes de utilizar dichas zonas o proceder a la limpieza de las mismas, se deberá ventilar adecuadamente cada zona tratada. La ventilación se realizará siempre después de haber transcurrido el plazo de seguridad.</p>
Befote Treatment	During Treatment	After Treatment
<p>Prior to treatment shall be communicated to the areas affected by it.</p> <p>If treatment is to be performed in inland areas, should cut the ventilation system in areas where it will perform the treatment.</p> <p>If treatment is to be performed in outdoor areas, should close doors and windows of outbuildings to the treatment area.</p>	<p>It will not be allowed the presence of people outside the company's technical staff in the areas to be treated during the course of treatment. Nor is it permitted the presence of animals during application of biocides.</p> <p>Not be permitted the transit of persons, animals or vehicles during the course of treatment.</p>	<p>Do not use the treated areas, as well as those who have been affected until after at least 12 Hours after the treatment. These areas have been reported in previous form.</p> <p>If treatment has been conducted in inland areas, before using those areas or proceed to clean them, you should ventilate each treated area. Ventilation is always made after the expiry of the security.</p>
